

Flat Gauge Arch

A typical flat arch suitable for all kinds of openings. Flat Gauge arches usually have a Brick and Bat pattern and between 3 to 5 courses high. Standard joints have 10mm spacing, and require pointing on site. These arches are available on any type of structural or non structural backing.

Shown here with a 1200mm opening, 215mm high
Brick and Bat pattern.

Brick Fabrication arches are prefabricated in a factory controlled environment. Bricks and brick slips are cut on advanced CNC machines to ensure every arch is made to the highest standard.

With a wide choice of structural and non-structural arch backing solutions, and so many finishing options available, almost any arch system can be manufactured to suit your requirements.

For full product details and available options please see the Brick Fabrication Arches brochure or visit www.brickfabrication.co.uk.
