

# Segmental Arch

Shown here with a 1200mm opening, 215mm high Soldier pattern and a 150mm rise.

Segmental arches are made up of a number of identically and slightly angled bricks which form the shape of the arch when assembled. These arches typically have a rise of 75mm or 150mm (1 or 2 courses). These arches can be produced in any brick pattern and height. The rise allows for Infill panel options to suit and match any opening.

Brick Fabrication arches are prefabricated in a factory controlled environment. Bricks and brick slips are cut on advanced CNC machines to ensure every arch is made to the highest standard.

With a wide choice of structural and non-structural arch backing solutions, and so many finishing options available, almost any arch system can be manufactured to suit your requirements.

For full product details and available options please see the Brick Fabrication Arches brochure or visit [www.brickfabrication.co.uk](http://www.brickfabrication.co.uk).

## Segmental Arch Options:

### Structural Backing Options:

Steel Reinforced Panelite  
Steel Reinforced Concrete  
Structural Steel

### Non-Structural Backing Options:

Panelite  
Loose Cut

### Height & Pattern Options:

Brick and Bat 215mm High  
Brick and Bat 290mm High  
Brick and Bat 365mm High  
Soldier 215mm High  
Single Header 102mm High  
Double Header 215mm High  
Soldier Header 290mm High

### Soffit Options:

Non-Faced Soffit  
Faced Soffit

### Infill Panel Options:

Plastic (PVC)  
Brick  
Painted  
Render Prepared

Please note: Infill panels cannot be used with a faced soffit.
